

DevOps Bootcamp

18 PMI PDUs | 18 IIBA CDUs

Joel Foner
Instructor

Format: Live Instructor-Led
Online through Zoom

Date: Mar 29 - Apr 1, 2027

Time: 12:00 PM - 5:00 PM ET

Price: \$550 per person

To register:

Email Chris Remmert
cremmert@nysforum.org
and indicate the course
title in the subject line.

Technology and Attendance

Requirements:

Computer with a
browser, Zoom, a
microphone and
speaker. For this
workshop, camera
should be on if possible
and you must be
actively participating.

This course will cover DevOps Fundamentals and DevOps Security. In solving one problem, agile has created a new bottleneck at the interface between development and operations teams (and others such as security teams), each having very different goals. DevOps has evolved as a way to bring these teams together and accelerate the delivery of value to the users and customers.

Taking a holistic view, the course looks at what is needed from the perspectives of the people and culture, the processes followed, and the technology used. The experiences of organizations successfully applying DevOps is used to drive an evidence-based approach to change. Emphasis is placed on using value stream mapping to understand the big picture and identify any improvements to make.

DevSecOps is taking DevOps and integrating IT teams and security experts, from the beginning, to plan and develop in stages and looking at security in those stages instead of just looking at security at the end of the project. To understand what you need to be “concerned” about you will learn vulnerabilities and security risks so that you can prevent them and build a secure DevOps operation and move your DevOps to DevSecOps.

Learning Outcomes:

- Identify practices to support the desired culture
- Evaluate how effectively the current technical practices support the delivery of value
- Use value stream mapping to understand the needs and constraints
- Identify what changes to make as part of continuous improvement
- Identify cyber security risks and stay up to date with the latest threat tactics as they emerge and change
- Assess the impact of security threats on different phases of the software development lifecycle (SDLC)
- Use good practices for building a secure DevOps pipeline.

DevOps Bootcamp

18 PMI PDUs | 18 IIBA CDUs

Great for:

- Any project professional wanting an introduction into DevOps value stream mindset, workflows and requirements.

Content:

- History and challenges that led to DevOps
- Cultural challenges and effective leadership
- Changing the culture and processes
- Value stream mapping
- Effective use of the supporting technical practices (e.g. continuous integration, infrastructure as code)
- Getting useful telemetry to understand where any problems are
- Architecture and its impact on delivering value
- Incorporating security / DevSecOps
- Building a pipeline for CI (Continuous Integration) / CD (Continuous Delivery)
- Continuity planning, SRE (Site Reliability Engineering), and ITIL (IT Infrastructure Library)
- Understand Security risks and threats
- Securing DevOps Pipeline

Lecturing is kept to the minimum necessary where most of the learning is achieved by applying the practices and techniques in group exercises. Our LiveOnline delivery is over three days (each four and a half hours in duration). The instructor is 100% live and interaction and learning objectives are the same as our in-person classes with the added benefit of being able to take this course from your home, your office or your home office. Since this class is delivered over half-days it allows for greater flexibility and leaves you with time each day for other work or activities.
